

PROCESS TAKT TIME
DISPLAYS ELAPSED DOWNTIME AT 0

BPCN-49940-3P-IRR-BOX-LGYR-USB-ETHR

SPECIFICATIONS

TYPE:----- DIGITAL
 DISPLAY:----- 4-DIGIT, 7 SEGMENT RED SUPER BRIGHT LED
 CHARACTER HEIGHT:----- 4" (101.6 mm) 9 THOUSAND 9 HUNDRED AND 99
 VISIBILITY:----- 250 Ft. (76.2 METERS)
 POWER REQUIREMENTS: 100-240V 50~60Hz (**SWITCHING POWER SUPPLY**)
 FRAME:----- 18.25" x 30.25" x 1.5" (**Black Anodized Aluminum**)
 WEIGHT:----- 11 lbs.
 OPERATING TEMP.:----- -17° TO 182° F
 HUMIDITY:----- 0% TO 95% NON-CONDENSING
 OPERATING MODE ----- ACTUAL COUNT UP BY 1 VIA 15 FT SWITCH BOX. PROCESS TIME COUNTS DOWN TO 0. AT 0, DISPLAYS ELAPSED DOWN TIME; GOAL AUTOMATICALLY INCREASES BY 1 VIA HIDDEN TAKT TIMER WITH RUN/HOLD AND RESET CONTROL; USB TO PC CONNECTION AND ETHERNET CONNECTION FOR WEB-BASED INTERFACE FOR HISTORICAL DATA

BPCN-49940-3 Switchbox / IRR Instructions

Switchbox Used For:

- Counting Up on Actual
- Counting Down on Actual
- Hard Resetting Displays

IR Remote Used For:

- Setting TAKT Timer
- Running and Pausing TAKT Timer

SWITCHBOX INSTRUCTIONS

Count Up / Down	(UP) to increase count by 1 (DOWN) to decrease count by 1
Freeze Actual Count	Press and hold (DOWN) for 3 seconds until LED dot appears on Actual display. To resume, press and hold (DOWN) until dot disappears.
Reset Actual Count	Press and hold (DOWN) for at least 5 seconds until Actual display flashes 3 times. The Actual display will reset to 0 and the Process timer (if set) will reset to the preset time. Press and hold (DOWN) again until LED dot disappears to release from hold.
Freeze TAKT Timer & Goal Count	Press and hold (UP) for 3 seconds until LED dot appears on Goal/TAKT Time display. To resume, press and hold (UP) until dot disappears.
Reset Goal	Press and hold (UP) for at least 5 seconds until Goal display flashes 3 times. The Goal display will reset to 0. Press and hold (UP) again until LED dot disappears to release from hold.

IRR INSTRUCTIONS

Pause TAKT Timer	Press ● button on bottom left of remote. Device will display Device Number. Enter Device Number (XX) on remote. One of the display's colons will flash and will be in "Focus" mode. Press (NEXT) several times button until TAKT Timer's colons are flashing. Press (RUN/HOLD) to pause. Press again to resume.
Change TAKT Timer Start Value	When TAKT Timer is in Focus (see above instructions), press (ENTER). First digit will flash. Enter new start value in MMSS format. Press (ENTER) to save. Press (STOP) to cancel.
Change Display Brightness	When any display is in Focus, press (ENTER). First digit will flash. Press the (UP) button to increase brightness or (DOWN) button to decrease brightness. Each press increases/decreases by 10%. Do NOT press (Enter) to save. Press (NEXT) to save and change Focus to another display.

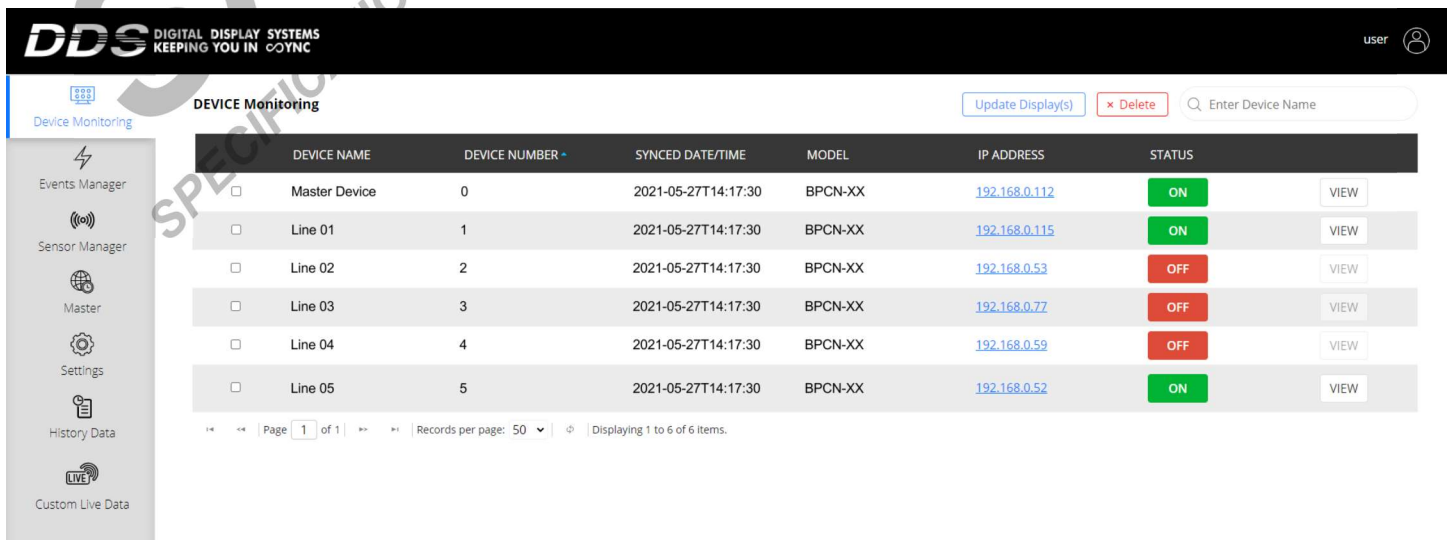

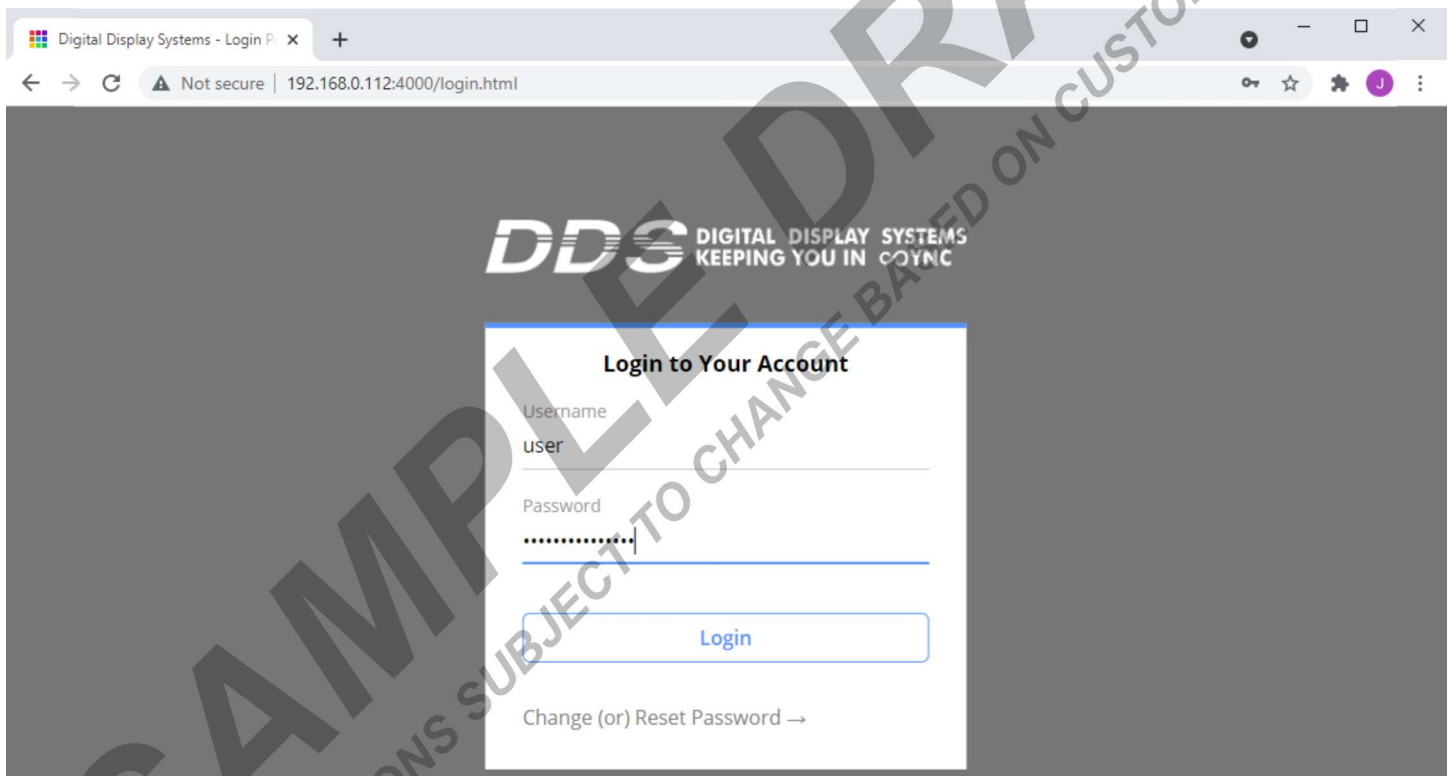

FEATURE: View All Devices Remotely via Local Network*

* Requires Ethernet to Local Network connection. WIFI connection available upon request for additional cost.

Smart efficiency displays can be connected to the same network and assigned individual IP addresses via DHCP server. Access each device individually via a secure Linux-based web browser page or monitor all devices on the network on master device.

What if the master device is offline?

Don't worry, you will still be able to access the secondary devices individually and can quickly set up one of the secondary devices as a new master.

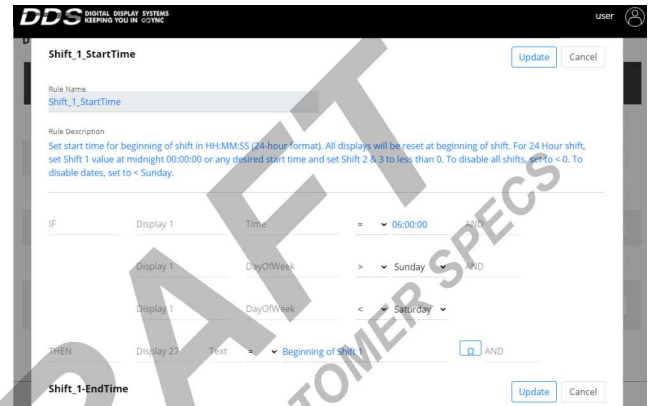

FEATURE: Schedule Up to 3 Shifts and 100+ Events/Breaks

Set Beginning & End of Shifts

Save a bit of time from resetting devices early in the morning and from recording data manually at the end of each shift by using rules.

When a shift begins, all metrics will be reset to 0 or their starting value.

When a shift ends, metrics (aside from the Actual count) will be frozen and a record of data will be saved for future export via .csv file. Set up email notifications to have a snapshot of the data sent directly to your inbox at the end of each shift.

Schedule Breaks into your System

Events on the Smart Efficiency System allow you to set up scheduled breaks. During scheduled breaks, goal timer will be paused. Connect an Andon light or buzzer to remind employees on the work floor to take a break when they should.

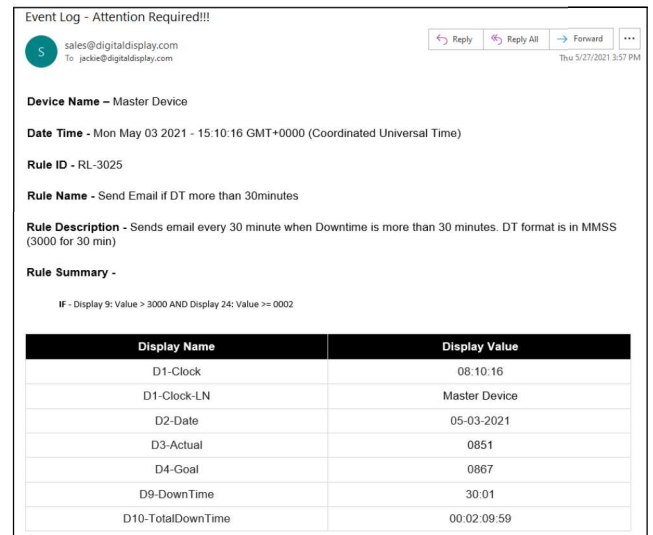

EVENT DESCRIPTION*	START TIME (HH:MM:SS)*	ALERT TYPE*	START ALERT DURATION (SEC)*	END TIME (HH:MM:SS)*	ALERT TYPE*	END ALERT DURATION (SEC)*	SWAP DISPLAY*	SETTINGS*
1st Break	10:00:00	None	0	10:15:00	None	0	None	[Settings] [X] [+]
Lunch	12:00:00	None	0	12:30:00	None	0	None	[Settings] [X] [+]
3rd Break	14:00:00	None	0	14:15:00	None	0	None	[Settings] [X] [+]

[Save] [Cancel]

FEATURE: Email Notifications

Aside from End of Day emails, managers and leaders can receive instantaneous email alerts when production is down.

For example, use rules to send an email when a machine's downtime is over 30 minutes. Then, escalate the issue if the downtime is over 1 hour by sending an email directly to the supervisor.

FEATURE: Historical Data Export

Track and download up to 6 months or 40,000 lines of historical data for each device in .CSV format.

FEATURE: Custom Live Data View

Sometimes, supervisors need to track KPIs that don't necessarily need to be shown to all employees on the floor. The Custom Live Data view allows people in charge to view all the relevant metrics that aren't on the physical scoreboard. Values and start times for timers can also be quickly set up via Live Data view.
